# What's new in 2011 M5

---

## Trading Pro

### **HB#55958 New Column in Market View**

The market data view now contains a new field, Last Trade Time. This indicates time of a Last Traded Price field update.

### **HB#57848 Eurex Prices to Show in the Opening Auction**

The market data view has been extended to add the field Opening Price. It will display an opening auction price (on some exchanges called theoretical, potential, indicative...). The field will be available for Futures, Options, Overview and Watch views.

### **HB#62451 Menu Change**

The wording of a menu item has been changed:

FROM

Tools --> Options --> Orders --> "Use Trading day for order retrieve"

TO

Tools --> Options --> Orders --> "Show today's business only"

### **BT17353 Language Pack for Trading Pro - Italian**

Trading Pro has been localized to Italian.

## Tracking Pro

### **HB#56421 New Order Arrival Sound Alert**

An alert sound has been implemented amongst alert options. It can be set up to sound when a new order confirmation arrives from the exchange.

## Risk

### **HB#45734 WPF Risk Manager**

Risk Manager has been rewritten to WPF platform, allowing for FFastFill Orbit to be created. The GUI with the new dashboard has been implemented.

## **HB#49906 Risk Service Refactoring & Optimization**

Risk service implementation has been optimized for faster responses and better performance. The latency has been reduced especially for algo trading purposes in the future.

## **Gateways**

### **HB#38823 Liffe UTP Drop Copy**

Drop copy has been implemented for the Liffe UTP connector.

### **BT18447 Back-End Generated Last Trade Price Direction**

The last trade price direction is currently indicated in front-end trading applications (Trading Pro). The indication of direction is now calculated in a gateway. The advantage is that this is generated centrally for all application instances and it will not depend on price feed calming.

## **System Infrastructure**

### **HB#45720 Historical Prices**

Historical market prices are now saved. They will be utilized for market data charts, VWAP orders and other relevant purposes.

### **HB#58510 Support Online Modification of Company Slave Locations in GBDS**

Replication of setting changes between master and slave GBDS no longer requires a global restart of NG.

### **HB#62783 Adding Exchange Column to “Not Running” Section in System Manager**

An ‘Exchange’ column has been added to the ‘Not Running’ section in System Manager. This will allow for grouping via exchange.
